Join Peter for a conversation with Lisamarie Windham-Myers on the importance of preserving and restoring “Blue Carbon” wetlands as buffers for global adaptation to sea-level rise and mitigation for rising atmospheric CO₂. Biologist Windham-Myers researches plant physiology and its influence on carbon, nutrient, and trace-metal biogeochemistry in wetlands. Based in Menlo Park, California, she participates in local, national, and international efforts to monitor and model greenhouse gas fluxes in coastal wetlands.

Peter Byck is the host of a lecture series offered by ASU’s Global Institute of Sustainability. Carbon Nation Conversations is a climate change solution conversation [that doesn’t even care if you believe in climate change]. Byck is also the director, producer and writer of Carbon Nation™, a climate change solutions movie.

Wednesday, October 2, 2013
12:30 – 2:00 p.m.
Marston Exploration Theater, ISTB4 Building
Arizona State University, Tempe campus
(lunch will be provided at 12:00 p.m.)

RSVP: sustainabilityevents@asu.edu
