Ecology Explorers: Bringing CAP LTER to community stakeholders

Maria Eller¹

¹School of Sustainability, Arizona State University, PO Box 875502, Tempe, AZ 85287-5502

Introduction
A unit of the Central Arizona-Phoenix Long-Term Ecological Research (CAP LTER) program, Ecology Explorers seeks to provide a broader impact of CAP LTER by giving students, teachers, and community members the opportunity to learn about the ecology of our desert cities and its complex dynamics being studied. Ecology Explorers:

- Strengthens science curriculum by developing lessons based on current urban ecology research performed by CAP LTER that follow state and national science standards
- Engages students in the scientific process of developing hypotheses, planning the experiment, collecting data collection, and analyzing results
- Provides teachers with lesson plans, slide sets, facilitated lessons by Ecology Explorer staff, and professional development
- Extends community awareness of urban ecology in Sonoran Desert to include relevant sustainability issues

Lessons and Outreach
Ecology Explorers develops and publishes lessons at the elementary and middle school levels. The topics of each lesson originate from published work by CAP LTER scientists. In the lessons, vocabulary and/or techniques are defined, background information is given, and the results or protocols represent those used in the actual research that inspired them. Ecology Explorers lessons:

- Include the following topics:
  - Birds and arthropod identification
  - Urban Heat Island
  - Land use and policy
  - And response to environmental change by organisms
- Follow the BSCS 5E Instructional Model of Learning to create an engaging, experiential learning experience for both students and teachers that allow students to build their own understanding of scientific concepts and skills

Outcomes
The mission and goals of the Ecology Explorers program is achieved through:

- Introducing ecology concepts into the classroom using actual scientific research
- Expanding teachers’ research skills and increase breadth of scientific knowledge
- Providing undergraduate and graduate students opportunity to serve as educational outreach volunteers; students gain experience in both formal and informal environmental educational settings.

Conclusions
Ecology Explorers focuses its educational efforts within the field of urban ecology. By utilizing the research performed by CAP LTER to create and implement environmental education programing for elementary and middle school age students. The program’s work demonstrates that residents of the Valley or Central Arizona-Phoenix are stakeholders of CAP LTER as the research taking place involves the urban ecosystem of which they are a part. Similarly, the Ecology Explorers program signifies the importance of bridging the academic sphere with the public sphere through environmental education. The lessons on what it means to live in an urban area within the Sonoran Desert both increase environmental and scientific literacy across all age-groups and contribute to the public’s sense of place.

Members of this program work to increase ecological understanding across the state by performing education and outreach work at schools, after school programs, public events.

Acknowledgments
I would like to acknowledge Lisa Herrmann for serving as my supervisor and mentor throughout the past semester. None of this could have happened without you. Photos were taken by Victoria Comeaux and Lisa Herrmann. Ecology Explorers is supported by the National Science Foundation under grant nos. BCS-1026865, DEB-0423704 and DEB-9714833
